

Sustainable Development Policy

solutions...

enabling business development

Updated 19th January 2011

1 Statement of policy

To do this the Beacon Interim Management (BIM) will :-

Implement the BIM Sustainable Development Policy:-

- Use, where possible, energy from low carbon technology, such as renewable energy sources rather than from fossil fuel sources.
- Operate an office energy management system which closely monitors energy usage
- Operate as far as practicable paperless office systems
- Operate a 100% recycling policy on any unavoidable waste generated
- Minimising travel by use of alternative communications technologies
- Travel as far as practicable via the lowest carbon emissions method available.
- Implement 'People' solutions including education in efficient energy use and the development of a culture of energy awareness and accountability
- Procurement, which integrates low/renewable energy and carbon reduction into decisions regarding energy purchasing and the purchase of equipment and materials.

The Sustainable Development Policy will be reviewed and updated annually.
